

Deep Amish Shah

Jersey City, NJ | (+1) 551-260-7414 | shahdeep2001@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

AI Engineer with 3+ years of hands-on experience building and deploying Intelligent systems.

Expertise in building an End-to-End Voice AI System, Mass Email Marketing tool, Autoresearch Agent.

Work Experience

SSVP AI

Applied AI Engineer

Jan 2026 - Present

- Developed a computer-use agent ("AI technician") that automates pharmacy workflows inside a legacy PMS, powered by a fully on-device AI stack — OCR, **vision-language model** (Qwen3.5-VL)- converting handwritten prescriptions, faxes, insurance cards, and IDs into structured data while keeping all PHI on pharmacy hardware, making HIPAA compliance architectural rather than policy-based.
- Architected 5 production modules — prescription auto-typing, NDC-level perpetual inventory, PBM audit defense, insurance/ID capture, and automated ordering — running on a perceive → reason → act → verify agent loop with pharmacist sign-off, confidence-scored human review, and an append-only audit trail, projecting **\$50K+ per store** annually in recovered audit dollars and **~1,500 reclaimed technician hours**.

Finerr

Applied AI Engineer

Dec 2024- Dec 2025

New Jersey, USA

- Architected a production-grade pharmacy **Voice AI Agent** on LiveKit WebRTC, Twilio, Deepgram STT, and ElevenLabs TTS into a fully streaming end-to-end pipeline, achieving **sub-900ms** first-word latency for inbound phone conversations.
- Designed a **LangGraph** state machine to orchestrate 10 pharmacy-specific conversation flows — including prescription refills, drug interaction queries, and insurance escalations and automatically routing to after-hours handling, human transfer, or confirmation nodes based on real-time caller intent classification.

AI Development Intern

May 2024–Nov 2024

- Collaborated with licensed pharmacists to understand real-world call workflows and convert operational needs into technical requirements, while self-learning AI engineering fundamentals to independently drive the full system implementation.

Indian Institute of Science

Computer Vision Intern

Feb 2023-Aug 2023

Bengaluru, India

- Architected a defect detection pipeline for high-precision metal defect detection at IISc's Smart Factory, leveraging **YOLOv8** for defect detection, achieving **90.5% mAP**.
- Specialized the defect detection model for **Pneumatic Cylinders & DC Motors** by creating and manually annotating a **400-image custom dataset**, integrating it with the 9.4k NEU benchmark dataset to improve real-world performance.

Achievements

- Awarded a **\$14,000 merit-based scholarship** toward my Master's degree in Data Science at Stevens Institute of Technology.
- Awarded a certificate and **\$500 honorarium** at the Indian Institute of Science, the nation's top-ranked research institution.

Live Products

Pharmacy M&A Marketplace [Link](#)

- Built a full-stack marketplace from scratch — 24 pages, 4 user dashboards (buyer, seller, agent, admin), and a unified permissions system so each role only sees what they're allowed to.
- Integrated 6 external services (file storage, Dropbox Sign e-signatures, email, maps, rate limiting, background jobs) and set up **Vercel CI/CD** with automated deployments across separate production, preview, and development environments.

Cold Email Outreach Automation tool [Link](#)

- Engineered an end-to-end **outreach automation** pipeline that scrapes live job descriptions and LinkedIn data, extracts and verifies contact emails, and generating **hyper-personalized** outreach with Claude Opus on **NVIDIA's H100** GPUs inference.
- Deployed bulk delivery via **Google Workspace** at scale, dispatching 2,000 emails using Dripping mechanism on render — maintaining a **<2% bounce rate** and driving a **28% response rate** through precision targeting and authenticated infrastructure.

Education

Stevens Institute of Technology, New Jersey

Sep 2023-May 2025

Master of Science: Data Science

Adani Institute of Infrastructure Engineering, India

Aug 2019-May 2023

Bachelor of Engineering: Information and Communication Technology

Technical Skills & Credentials

Programming Language:

Python, Typescript

AI Engineering Skills :

RAG Pipeline, Agentic Orchestration, Context Management, Fine-Tuning, Evaluation & Observability, Vector embeddings.

AI Tools:

n8n, Claude code, Vercel, Antigravity, Zapier, Langchain, render, railway, Livekit

Cloud expertise:

AWS, Azure, Docker, Kubernetes, Git, CI/CD

Databases & Data:

PostgreSQL, pgvector, Redis, Snowflake, Vector Databases

Certifications:

AWS Solution Architect – Associate, Microsoft Certified: Azure Administrator Associate
